The best Windows 10 apps for your new Windows Central 2020 PC you just got and set up a new Windows 10 PC, and now you're looking for some great apps to get started. Whether Microsoft Store is designed for productivity, entertainment, or somewhere, you'll need apps. Here are some of the best for your new Windows 10 PC: ReadIt is a universal Windows Platform (UWP) program that lets you browse Reddit with an almost flawless user. Scroll through the messages on the left and read and comment on the right side and get it all working as you want thanks to a lot of settings. From free Microsoft to myTube is a simple layout that allows you to easily browse and save videos, as well as read and make your comments, all while the video plays. You can even listen to videos while you're using other apps, which is great if you're in multitasking. From \$1 Microsoft Netflix has been turning some pretty incredible original shows lately in addition to its huge collection of beloved movies and hit TV shows. With the intuitive Windows 10 app, you can easily access the entire line without opening your web browser. Subscriptions start at \$9. For free Microsoft Enjoy AES-256 encryption, password generator, password auditor, and easy backups, as well as use cloud synchronization with services like Dropbox and OneDrive. If you're using multiple devices, you can take advantage of cross-platform compatibility and don't forget about the free Edge extension. The app from the free Microsoft Spotify is free and you can really enjoy some parts of the service without paying anything. However, if you want to stream music without ads and on demand, if you want to listen offline, and if you want something to improve quality, you'll want to explore a premium subscription for about \$10 a month. Free in Microsoft Office 365 is a subscription-based model that provides all your favorite Office tools, including Word, Excel, PowerPoint, and Outlook. You can choose from personal, home, and business suites based on user requirements and choose each year or monthly subscription. All subs per user also have 1 TB of OneDrive storage. Although the full version of Adobe Photoshop Elements is a powerful editing tool, many people don't need as many features. Photoshop Express is the answer. Here are basic tools such as crop, flip, rotate, and straighten, and you can adjust brightness, contrast, and exposure. It's a perfect, lightweight photo editor that doesn't swamp down your system. Free Microsoft ExpressVPN is a top-level paid VPN service that will help privacy and security while navigating the online world. More than 90 countries have more than 3,000 servers, ensuring that you no matter where you go. The Windows 10 app is free, although you'll need to subscribe to a monthly plan. From \$7 a month to ExpressVPN if we're making some suggestions All! The apps above will be a great addition to your new Windows 10 PC, but there are a couple we recommend you get first. Enpass is especially important when it comes to your digital security, so starting is not a bad idea. If you're using your PC for productivity, Office 365 needs to quickly prove itself invaluable and don't forget to add Netflix to the suite to find out when you want to kick back and relax. If you're looking for additional apps that accompany your Windows 10 PC with touch and ink, check out our best apps for an active pen. We can earn commission on purchases using our links. To learn more. We love two-factor authentication, and we love the services that make our text messages available from our computers. However, if you don't want someone—a snooping spouse, a child, a parent, or, most importantly, a laptop thief, to get your private information call, you might want to change the way you use two-factor authentication. Two-factor authentication is one of the best ways to password security, but if you're using services like Yosemite to transfer new text messages with iOS 8.1 or MightyText on Android, make sure you're not using SMS as a second step in the authentication process. Anyone with access to your PC will be able to see the second step, the verification code, from the PC, whether or not they have your phone. Instead, use a USB key or our favorite authentication app for Android and iPhone to generate a code from your phone and disable SMS as a second step. Authy can even hide behind PIN codes for extra security. Two-factor authentication is one of the most important things you can do to protect yourself... Read moreCont online for two-factor authentication via SMS forwarding | Unofficial Apple WeblogPhoto with MIKI Yoshihito.G/O Media can get commissions you don't need on Amazon Kindle to read Kindle books. Using the Kindle app for Windows, you can enjoy the latest bestsellers and literary classics on your laptop or desktop computer. Here's how to read Kindle books on the pc. Kindle PC comes with the same features as Amazon's popular e-book reader. You can insert bookmarks, highlight text, and add notes. You can also adjust the text size and page formatting to your liking. In addition, the Kindle pc is compatible with most versions of Windows, including Windows 7 through 10, Windows 2000, Windows Me, Windows XP, and Windows 98. There is an older version of the Kindle reader app called Kindle for Windows 8, but it is no longer supported. You can use it, but consider upgrading to a Kindle PC to enjoy new features and updates. Mayur Kakade/Getty Images If you don't have one, set up an Amazon account to buy and read Kindle books. Visit amazon.com. Move your mouse pointer over accounts and conversations in the upper-right corner of the page, but don't develop it. Select Start here from the drop-down menu below the button Fill in the registration form. You must provide e-mail address and account password. When you're done, select Create your Amazon account. You've been redirected to the Amazon website. Select Accounts and lists to send to the account page. Now you can download free Kindle books. If you want to buy books, set up a payment method. On the Account page, select Payment options and provide the requested information to make purchases on Amazon. No matter which version of Windows you have, the steps to set the Kindle PC app are the same: Visit the Kindle PC download page and select Add to Cart. Choose a payment method and select Continue to cash. Select Insert order. On the next page, select Digital Items. Next to Kindle PC, select Download. Open the file when it finishes downloading. Kindle pc must be installed automatically. Kindle PC appears on the desktop or in the apps list inside the Amazon folder. When you open it, you're prompted to provide your Amazon account email address and password. If you have a Kindle, or if you have a Kindle app installed on another device, you can download all the books you bought. Bookmarks, notes, and progress must be forwarded. Under Library Options, select All, and then select the cover for the book you want to read on your computer. Use the drop-down menu in the upper-left corner of the program window to sort books by name or author, or enter a name in the search bar. To buy a new Kindle book on your PC: When you're connected to the Internet, select Kindle Store in the upper-right corner of the app window. You've taken to the Amazon website in your default browser where you can browse thousands of names. On the product page, select Buy now with 1 click to deliver the name you want to all devices. Here are some tips to help you get power-efficient with the Kindle app for your computer: turn pages by selecting or turning the right or left side of the screen. Or, use the left and right arrow keys on your keyboard. To customize the font and page layout, select Aa at the top of the program window. To set a bookmark, select or tap the upper-right corner of the page. A blue symbol appears to indicate that the bookmark has been successfully positioned. To create a note, right-click anywhere on the page, or press and hold if you're using a Tablet PC. In the left pane, select the index card symbol to create cards. To see bookmarks, highlighted games, cards, and notes, select Show notebook in the upper-right corner. Google announced that it is implementing two-factor authentication for Google Apps to improve security. The introduction of stricter authentication controls removes one of the barriers for businesses to embrace Google Apps, and makes a productivity suite a more viable option for cloud-based security-related organizations. Safety is one of the biggest obstacles for many when it comes to cloud computing service considering. Web-based services have the advantages of available from almost anywhere, not being shackled to local storage of a particular machine, but where users can access data from anywhere to allow attackers. Despite decades of user awareness efforts, passwords are often tiny to guess or crack. Password compromise RockYou.com given a unique opportunity to check the actual passwords used in the real world. More than 30 million passwords exposed when the RockYou.com study was hacked found that nearly half use names, common dictionary words, or sequential characters like qwerty. These odds don't help IT admins sleep better at night. It's bad enough that half of lost or stolen laptops, or portable storage devices such as USB thumb drives, can contain data that is trivial to get unauthorized access – but voluntarily placing the same data on the web where anyone with an Internet connection can access 24/7 is like begging for data to be compromised. Two-factor authentication strengthens the security of Google Apps by relying on technology that is almost as ubiquitous as the Google Apps productivity platform on the web: mobile phones. If two-factor authentication is enabled, in addition to the standard account password, you need a one-time authentication code from your mobile phone to access Google Apps. Companies covered by Sarbanes-Oxley, HIPAA (Health Insurance Portability and Liability Act), CPI-DSS (Data Security Standard in the Payment Card Industry) and other regulatory and industry compliance powers must have certain safety controls or risk serious legal and financial consequences. With the possibility of stricter authentication, organizations have reason to take another look at Google Apps. There's a potential downside as well, though. Although the mobile phone is almost as ubiquitous as the Web itself, it is also a mobile device that is easily lost or stolen. An attacker with a cell phone or smartphone in hand would have access to the second authentication factor, and the presence of the Google Authenticator app would be a giveaway that the user has a Google Apps account. But, this is called a two-factor reason, and an attacker still has to set a username and password to successfully compromise your Google Apps account even with access to a one-time authentication code. By adding two-factor authentication, Google Apps is a much more attractive option for security-conscious organizations. IT administrators who have avoided Google Apps should recheck the benefits of the web productivity suite.
